Mit C# eine "multiplyViaAddition" app geschrieben und dann 4 mal mit verschiedenen Werten getestet. (nur Natürliche Zahlen erlaubt)

```
4references
static public int multiplyViaAddition(int multiplicand, int multiplier)
{
   if (multiplicand <= 0 || multiplier <= 0)
   {
       return 0;
   }

   int result = 0;
   int counter = 0;
   while (counter < multiplicand)
   {
       result += multiplier;
       counter++;
   }

   return result;
}</pre>
```

Ausgabe durch console:

```
Oreferences
static void Main(string[] args)

{
    Console.WriteLine(multiplyViaAddition(5, 2));
    Console.WriteLine(multiplyViaAddition(-2, 2));
    Console.WriteLine(multiplyViaAddition(10, 5));
    Console.WriteLine(multiplyViaAddition(0, 33));
}

Console.WriteLine(multiplyViaAddition(0, 33));
}
```

	Eine wird gewinnen!
A	Igorithmus: (Pseudo Cade)
96	ed Winner (n as a List, m as an integer):
	If (size_of_List <=0 or m <=0) then
	return -1
	else IF (size of List == 1) then
	sully return List [0]
	integer remove Index = 0
	WHILE (size_of_List > 1) do
	remove Index # 44 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4
	WHILE (remare In dex 7 = size - of - List) remar In dex -= size - of - List
	end WHILE
	WList. Remove At (semove Index)
	end WHILE
	return List IoJ
en	ad get Winner
	remove Index % = size_of_List <= auch mit modula lösbar!
	(dann braucht man die zweite WHLE schleife nicht)
* Te	ests mit C# Jordhgolishrt => siehe nachste Seite,
a	Pseudo Code + cinmal mit der modulo Läsung)
	modulo (asyng)

Mit C# eine "winner" app geschrieben und mit zwei verschiedenen Lösungen getestet. Habe "int Lists" verwendet, da für die Spieler, in der Angabe, nur Ganzzahlen verwendet worden sind.

Erste Lösung:

Ausgabe durch console:

1 Test (1 zu 1 wie in der angabe)

```
Oreferences
static void Main(string[] args)
{
List<int> players = new List<int> { 1, 2, 3, 4, 5, 6, 7};

int winner_firstSolution = getWinner_firstSolution(players, 3);
Console.WriteLine("\nWinner: " + winner_firstSolution);

// int winner_secondSolution = getWinner_secondSolution(players, 2);
// Console.WriteLine("\nWinner: " + winner_secondSolution);

Winner: 4
```

2 Test (andere ausscheidungs Zahl + mehr players in der Liste)

```
coreferences
static void Main(string[] args)
{
    List<int> players = new List<int> { 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14};
    int winner_firstSolution = getWinner_firstSolution(players, 7);
    Console.WriteLine("\nWinner: " + winner_firstSolution);
    // int winner_secondSolution = getWinner_secondSolution(players, 2);
    // Console.WriteLine("\nWinner: " + winner_secondSolution);
    removing player 11...
    removing player 4...
    removing player 3...
    removing player 5...
    removing player 10...
    removing player 12...

// Console.WriteLine(multiplyViaAddition(2, 2));
    removing player 12...

// Console.WriteLine(multiplyViaAddition(0, 33));

// Console.WriteLine(multip
```

Zweite Lösung:

```
reference
static public int getWinner_secondSolution(List<int> listOfPlayers, int m)
{
   if (listOfPlayers.Count <= 0 || m <= 0)
   {
      return -1;
   }
   else if (listOfPlayers.Count == 1)
   {
      return listOfPlayers[0];
   }

   // copy list so the original remains unchanged
   List<int> _localListOfPlayers = new List<int>(listOfPlayers);
   int removeIndex = 0;
   while (_localListOfPlayers.Count > 1)
   {
      removeIndex += m - 1;
      removeIndex %= _localListOfPlayers.Count;
      Console.WriteLine("removing player " + _localListOfPlayers[removeIndex] + "...");
      _localListOfPlayers.RemoveAt(removeIndex);
}

return _localListOfPlayers[0];
}
```

Ausgabe durch console:

1 Test (1 zu 1 wie in der angabe)

```
Oreferences
static void Main(string[] args)

{
    List<int> players = new List<int> { 1, 2, 3, 4, 5, 6, 7};

    // int winner_firstSolution = getWinner_firstSolution(players, 3);

    // Console.WriteLine("\nWinner: " + winner_firstSolution(players, 3);

    int winner_secondSolution = getWinner_secondSolution(players, 3);

    Console.WriteLine("\nWinner: " + winner_secondSolution);

Winner: 4
```

2 Test (andere ausscheidungs Zahl + mehr players in der Liste)
